NAME

CUTEST_cifn − CUTEst tool to evaluate a problem function value.

SYNOPSIS

CALL CUTEST_cifn(status, n, iprob, X, fn)

For real rather than double precision arguments, instead

CALL CUTEST_cifn_s(...)

DESCRIPTION

The CUTEST_cifn subroutine evaluates the value of either the objective function or a constraint function of the problem decoded from a SIF file by the script *sifdecoder* at the point X, in the constrained minimization case. The problem under consideration is to minimize or maximize an objective function $f(x)$ over all $x \in R^n$ subject to general equations $c_i(x) = 0$, $(i \in 1, \ldots, m_E)$, general inequalities $c_i^l \leq c_i(x) \leq c_i^{u,}$ $(i \in m_E + 1, \ldots, m)$, and simple bounds $x^l \leq x \leq x^{u.}$ The objective function is group-partially separable and all constraint functions are partially separable.

ARGUMENTS

The arguments of CUTEST_cifn are as follows

status [out] - integer
  the outputr status: 0 for a succesful call, 1 for an array allocation/deallocation error, 2 for an array bound error, 3 for an evaluation error,

n [in] - integer
  the number of variables for the problem,

iprob [in] - integer
  the number of the problem function to be considered. If iprob = 0, the value of the objective function will be evaluated, while if iprob = i > 0, that of the i-th constraint will be evaluated,

X [in] - real/double precision
  an array which gives the current estimate of the solution of the problem,

fn [out] - real/double precision
  the value of problem function iprob at X.
